

BERANUS CO.

Frontend Engineering Across Multiple Client Products

Tehran, IR • 2021–2023

At Beranus, I worked across multiple client-facing web products, delivering high-quality frontend implementations, modernizing legacy interfaces, and improving performance, maintainability, and developer experience across diverse business domains.

01 Scope & Context

Multiple client projects across business, e-commerce, and corporate web experiences

Responsive, pixel-perfect UI delivery across devices and browsers

Legacy modernization and maintainability improvements

Close collaboration with design and backend teams

02 Key Engineering Contributions

Delivered responsive and pixel-perfect UIs across multiple client projects while maintaining consistency across browsers and devices.

Modernized legacy frontend applications, improving maintainability, scalability and performance.

Improved developer productivity and experience through reusable component patterns, shared utilities and style variables.

Managed Core Web Vitals and performance budgets; utilized Event Delegation and optimized side-effect handling to fix memory leaks and improve runtime performance on interaction-heavy sites.

Built reliable integrations with backend services and external APIs while improving error handling and data consistency across applications.

Developed scalable form experiences with improved validation, usability and accessibility standards.

03 Engineering Focus

Responsive UI

Legacy Modernization

Performance Optimization

Core Web Vitals

Reusable Patterns

DX Improvements

API Integration

Forms & Validation

Accessibility

Cross-Browser Consistency

04 Representative Product Surfaces

05 Impact

Improved maintainability through shared UI patterns and reusable utilities.

Reduced runtime issues by addressing side effects and memory leaks.

Strengthened UX quality through performance, validation, and accessibility improvements.
